

SHARMIN M.

Biotechnologist/Microbiologist

+918238712827

makranisharmin@gmail.com

Vadodara, Gujarat, India,
391135

Education

**Master of Science in
Biotechnology**
Parul University
2021 - 2023

**Bachelor of Science in
Microbiology**
Parul University
2018 - 2021

Relevant Skills

PCR, ELISA, Microscopy, HPLC,
Chromatography

Electrophoresis

Recombinant DNA Technique,
Blotting techniques

Aseptic techniques, Gram Staining,
Extraction techniques

MS-office and power-point

Diploma Certificate

**Post Graduate Diploma in
Medical Laboratory Technology**
Swarnnim Startup & Innovation
University
2023- 2024

Language

English

Hindi

Gujarati

Profile

Dynamic and motivated Microbiologist/Biotechnologist with a strong academic background, including a Master's degree in Biotechnology and a Bachelor's degree in Microbiology. With hands-on experience in laboratory research, training, and project development, I seek to leverage my expertise in biotechnological and microbiological techniques through diagnostics and Research, currently preparing for CSIR-UGC NET.

Professional Training

Molecular Dignostics & Laboratory Quality Trainings

OneLab -CDC supported platform |

Pursuing - 2026

- **Key Areas:** Training Molecular Diagnostic Workflow including , specimen handling, nucleic acid extraction, RT-PCR workflow, biosafety, Contamination Control, Diagnostic Interpretation

Work Experience

Namra laboratory

Lab Assistant

07-2024

-

02-2024

Managed Sample Collection, Instrument Calibration, Testing, and Reporting of results.
Ensuring Aseptic Environment

2023

-

2022

Research Project

Parul University

- Analysis of Effect of CuSO₄ and Indole-3-Acetic acid on *Brassica juncea* Seed germination and plant growth In Plant Tissue Culture.
- Assisted in developing method to Analyse and develop better quality product.

2021

-

2020

Review Project

Parul University

- A review on Plant extract and Drug active Against Methicillin Resistant *Staphylococcus aureus*
- Covered wide range of plants and Drugs inhibit growth of MRSA.

Analysing Biological Samples

- Chromatography (HPLC, Paper, Gas Chromatography)
- Electrophoresis SDS PAGE- Gel Electrophoresis
- Immunological Techniques- ELISA, Western Blotting
- Microscopy- analysing cells, Macromolecules

Isolating and Characterising Molecules

- DNA and RNA Extraction, Isolation, Purification
- Protein Extraction Purification using Chromatography and electrophoresis
- Quantifying Proteins, Chemical Components using Spectrophotometer

Microbial Techniques

- **Culture And Growth**
- Media Preparation (Nutrient Solution or Solid agar media)
- Aseptic Technique
- Inoculation Techniques, Incubation and isolation
- **Microscopy And Observation**
- Identification And Characterisation
- Gram Staining
- Studying Microbial growth, Bacterial Colony Morphology,
- Antibiotic Sensitivity testing
- Sterilisation Technique - Autoclave

Molecular Biology Techniques

- Polymerase Chain Reaction, RT-PCR
- Restriction Enzyme Digestion
- DNA Sequencing
- Gel Electrophoresis - Separating DNA Fragment
- Bioinformatics Tool - BLAST, FASTA for sequence Alignment
